

Nortel Bead Core Liner

Easy to Use

New — the Nortel Bead Core Liner
CORES 1/8 – 1/2 INCH

This new bead core lining tool has innovative and unique features to enable quick and easy tool changes for a large range of liner sizes.

The machine comes complete with a variety of sizes of ball-style forming tools for core liner sizes 1/8 up to 1/2 inch diameter.

Larger sizes of tools will soon be available for core liner sizes from 5/8 up to 1 inch diameter.

All steel forming tools are hardened and polished to prevent scratches and marks on the formed liner.

These same tools can also be used on the lower steel platform to assist in forming both ends of the core liner.

All tools easily click in and out of the vertical ram for quick change.

An integrated tool rack keeps forming tools handy and organized.

Testers say:

"It's easy and fast, and the metal core transforms a simple bead into a finished item of jewelry in minutes!"

"Easy to use!"

"The tools slip in and out in seconds — making lining one bead as easy as lining dozens."

"This liner does a fabulous job on perfectly made, well-dimpled beads. It also does an excellent job not only on perfect beads, but on less-than-perfect beads as well."

"So easy — you can make lined beads with your first try!"

Features

- Quick-change, interchangeable tools for a variety of bead-hole sizes (up to 1 inch)
- Adjustable handle — for the most comfortable position
- Solid construction
- integrated tool rack
